Software Developers wanted across Asia!

Here at MThree we are currently looking for Graduates to join our June intake for our Alumni Software Developer programme across Asia!

The Company
At MThree we understand that taking those first steps into your career can be daunting. With so many different opportunities and routes into employment in front of you, it's hard to know how to navigate. Within our Alumni Programme we are currently looking for Graduates who enjoy problem solving and coming up with creative solutions to join our firm.

As a Technology and Business Consultancy, we have a specialist training programme to help develop and evolve your skills. We will give you the support and guidance on how to find your feet in the work place.
You need to bring to us a positive mindset, willingness to learn and a professional attitude and we will provide with the divisional training and right skills set to excel.

By joining us you will have 4-8 weeks training in your specialist area and then be placed on site with one of our clients for up to 2 years. We believe this will give you flexibility to test yourself and to use us as a stepping stone into your future.

The Opportunity
Most commonly using Java, C++ and C#, Software Developers work with stakeholders across the business to create, test, and improve applications which play a fundamental role in the bank's daily operations.

You will be working throughout the Software Development lifecycle, from design and testing to support and maintenance while following an Agile methodology to constantly strive for better results.

Training
Our training includes:
- Professional Skills
- Financial Market Theory
- Software Development Life-Cycle
- Linus, Java, Python, Oracle, Jira….and many more!

Locations
- Hong Kong
- Singapore
- Shanghai

We are looking for Graduates who:

- Love programming and problem solving
- Work collaboratively with other teams across geographies keeping the business priorities in mind
- Work well under pressure, can multi-task, deal with demanding customers, knowing when to push back
- Are motivated and self-starters
- Are proactive
- Are team players
- Have strong written and verbal communication skills (ability to articulate technical issues to development team)
- Are highly analytical and numerate

Applicants should already have right to work in these countries as we do not sponsor visas.
